

DiagnosticSource™

DiagnosticSource™ provides real world insights into diagnostic orders and results across the enterprise—clinical, HEOR, new product planning, commercial operations, and brand management.

DiagnosticSource™ at a glance

DiagnosticSource™ provides timely patient-level insight into diagnostic test orders and results across a broad range of disease states enabling use cases across the clinical and commercial continuum. It provides real world insights with extensive data, a comprehensive network, and high linkability to Symphony's patient claims repository, Integrated Dataverse (IDV[®]).

Comprehensive coverage

290M+

est. patient lives covered by Lab Partner Network

275M+

unique diagnostic patient encounters per year

5B+

test results annually

4,000+

assays

250K+

patients with NextGen Biomarker data

3–5

years of history

DiagnosticSource™ includes:

- **Test:** Name, number/code, result description, and interpretation
- **Physician:** NPI, first name, last name, and specialty
- **Account:** Name, address, city, and state
- **Patient:** Synomald[®] 1, gender, and age

Additional information such as treating physician, diagnosis and treatment, payer, and follow up visits can be derived using IDV[®]. (final layout and data elements may vary by lab partner).

¹ Synomald[®] is the patient identifier reported within Symphony deliverables.

Greater understanding of diagnosis, treatment, and the patient journey with Synoma

Native linkage to Symphony patient claims data, powered by Synoma to enable HIPAA compliance, results in match rates >95%.

The combination of DiagnosticSource™ data and Symphony's Integrated Dataverse (IDV®) patient repository powers greater insight into diagnosis, treatment, and the patient journey, which helps:

- Right-size target patient population
- Drive diagnostic education
- Optimise commercial strategy
- Enhance patient journey

Features

- **Diagnostic test order and result information** including test name, ordering physician, account and patient information
- **Comprehensive ecosystem of laboratory partners** providing broad disease state coverage
- **Link to Symphony IDV® claims** — through our proprietary Synoma tokenization technology, patient match rates are typically >95%, and as high as 99%
- **Enables HIPAA compliance** both on its own and when linked to Symphony's extensive IDV® patient repository
- **Flexible delivery schedule** — one-time, quarterly, monthly, weekly or daily (limited)
- **Variety of delivery options** — flexibility to select any combination of lab partners and different levels of data access

Benefits

- **Extensive view of diagnostic data** enabled by a multitude of data attributes
- **Lower total cost of ownership (TCO)** as Symphony contracts directly with lab partners
- **More complete view of the patient** — additional insight into treating physician, patient diagnosis, follow-up visits and payers
- **Commitment to privacy** means you can use data with confidence
- **Faster speed to insight** with 100% of tests available weekly and select tests available daily
- **Price effective** — a broad range of options means you only pay for what you need

Speed to Insight

100% of tests available weekly and select tests available daily. DiagnosticSource™ is offered in a variety of delivery options to meet your needs:

Transactional Data

De-identified patient-level diagnostic test data, appended with Synoma ID^{®2}

Analytics

Diagnostic data used in specific analytical project engagements, such as a patient journey study or trigger program

Aggregation

Diagnostic data summarised (no de-identified patient level detail)

² Our proprietary Synoma® tokenization technology enables de-identification of patient-level data. SynomaID® is the patient identifier reported within Symphony deliverables.
